

Implementation Plan: Restructuring Workspace & Generating Deliverables

This plan details the steps to restructure the workspace into the requested `Task\_1\_Google\_Play\_Store\_Analysis` directory format, including creating directories, moving files, generating screenshots, compiling PDF documentation, and writing a README.md file.

Proposed Changes

Directory Structure Creation

We will build the following structure in the workspace:

```
Task_1_Google_Play_Store_Analysis/ ■ ■ ■ ■ Analysis.ipynb ■ ■ ■ ■ Dataset/ ■ ■ ■ ■ Play Store Data.csv
■ ■ ■ ■ User Reviews.csv ■ ■ ■ ■ Screenshots/ ■ ■ ■ ■ Graph1.png ■ ■ ■ ■ Dashboard.png ■ ■ ■ ■ Results.png
■ ■ ■ ■ Documentation/ ■ ■ ■ ■ Implementation_Plan.pdf ■ ■ ■ ■ Walkthrough_Guide.pdf ■ ■ ■ ■ README.md
```

Action Items

- Directories**: Create `Task\_1\_Google\_Play\_Store\_Analysis` along with subdirectories `Dataset`, `Screenshots`, and `Documentation`.
- Move Data/Code**:
 - Move `Analysis.ipynb` to the root of `Task\_1\_Google\_Play\_Store\_Analysis/`.
 - Move `Play Store Data.csv` and `User Reviews.csv` to `Task\_1\_Google\_Play\_Store\_Analysis/Dataset/`.
 - Adjust `Analysis.ipynb` path references if necessary (the CSV paths in cell 2 are currently `Play Store Data.csv` and `User Reviews.csv`. We should update them to `r'Dataset/Play Store Data.csv` and `r'Dataset/User Reviews.csv` so the notebook runs correctly in its new folder!).
- Screenshots Generation**:
 - Graph1.png**: Copy the generated `bubble\_chart.png` as `Graph1.png`.
 - Dashboard.png**: Write a script to render a combined grid figure of the dashboard's matplotlib plots (free/paid app ratio, rating distribution, installations, lineplot of updates, revenue) and save it as `Dashboard.png`.
 - Results.png**: Render and save the Random Forest model evaluation scatter plot (predicted vs true rating) as `Results.png`.
- PDF Documentation**:
 - Install `reportlab` or a lightweight PDF generation tool via `pip`.
 - Write a python script to parse our markdown Implementation Plan and Walkthrough Guide, generating beautiful PDF documents: `Implementation\_Plan.pdf` and `Walkthrough\_Guide.pdf`.

5. **README.md**: Create a professional `README.md` at the root of `Task\_1\_Google\_Play\_Store\_Analysis` describing:

- Overview of the Google Play Store Analysis.
- Restructured layout.
- Requirements & how to run the notebook.
- Time check restrictions and visual bubble chart findings.

Verification Plan

1. Verify that all folder hierarchies are correctly created and files are located at their expected target paths.
2. Run the notebook execution test script in the restructured directory to ensure `Analysis.ipynb` runs flawlessly (loading data from the new `Dataset/` folder).
3. Visually verify the generated screenshots and PDF documents in the `Screenshots/` and `Documentation/` directories.
